Linked Connections Reproduction

A reproducible environment for Linked Connections. This file server creates 2 endpoints for the Linked Connections Server:

1. `/static`: For the GTFS data
2. `/realtime`: For the GTFS-RT data

The file server can also serve the Linked Connections real time resource events directly:

1. `/events`: For HTTP polling clients
2. `/events/sse`: For SSE clients

Build instructions

Make sure that you have NodeJS 11.X or later installed, together with the latest Yarn package manager.

In the root directory of this repository run the following commands: 1. `yarn install` 2. `yarn start`
